Summary

Data Analyst with 1.5+ years in enterprise SaaS and prior backend engineering in a fintech product team, transitioning to Associate Product Manager. Defined 15+ product KPIs across 10+ Power BI dashboards, cut manual reporting time by ∼40%, and surfaced a 20% funnel drop-off that informed 3 product changes. Built MedNear 0→1, an AI-assisted medicine-availability app, from user research and PRD to live launch, and ran a 129-case AI evaluation that drove the go/no-go call: launch medicine lookup, hold back AI triage for safety.

Work Experience

Data Analyst – Product & Analytics Feb 2025 - Present
CSG Systems International *Bengaluru, India*

Product Metrics & Dashboards
- Defined and tracked 15+ product KPIs with Product and Engineering across 10+ Power BI dashboards, cutting manual reporting time by ∼40%.
- Set SQL and data-quality standards adopted across a 6-person reporting pipeline, reducing rework by 25% and raising trust in product metrics.

Funnel Analysis & Product Decisions
- Ran funnel analysis across 5+ reporting workflows, uncovered a 20% drop-off pattern, and informed 3 product changes agreed with cross-functional stakeholders.
- Presented data-backed recommendations to Product and Leadership, shaping prioritisation across 10+ sprints.

Backend Engineer – Product Team Apr 2024 - Feb 2025
Volopay *Bengaluru, India*

- Translated user behaviour data into sprint priorities and feature specs with Product Managers across 10+ sprints.
- Gave technical input on requirements for 5+ PRDs, assessing feasibility and trade-offs against product goals.
- Optimised SQL queries powering product analytics, cutting pipeline latency by 30%.

Projects

MedNear – AI Medicine Availability App (0→1) Live App
Personal Project *2026*

Discovery & Build
- Identified a costly user problem (wasted trips to out-of-stock pharmacies); ran a user survey, built personas, and wrote a PRD with user stories, MVP scope and a success metric (stock accuracy, 80% target).
- Shipped a working web app with AI-assisted development: medicine search, pharmacy portal and metrics dashboard, with sign-up, a PostgreSQL (Supabase) backend and crowdsourced stock confirmations.
- Redesigned ranking around one user question ("where should I go now?"): cut closed/out-of-stock suggestions from 30% → 0% of test searches and taps to directions from 2 → 1.

AI Evaluation & Launch Decision
- Set launch bars before testing (≥95% of emergencies caught, ≥90% lookup accuracy) and built a 129-case test set with an automated scorer covering brand, salt, typo, Hindi, Kannada and emergency queries.
- Found rules scoring 100% on known cases caught only 20% of emergencies on a blind set; launched medicine lookup, blocked AI triage, and routed emergencies to an urgent-help fallback, with evaluation running in CI.

E-commerce Funnel Analytics *MySQL, Power BI, AWS* | 2023

- Found a 23% cart-to-checkout drop-off through SQL funnel analysis; built 5+ Power BI cohort dashboards.

Urban Parking Analytics Platform *Python, MongoDB, AWS* | 2023 - 2024

- Built a real-time parking-occupancy pipeline and defined core metrics; won a Rs. 50,000 grant; Srishti 2024 and Smart Argothon 2023 finalist; patent filed.

Education & Awards

2021 - 2025	B.E. in Computer Science at **CMR Institute of Technology**, Bengaluru	(CGPA: 8.78/10)
Awards	Merit Scholarship | Best Mini-Project (Sem 1–5) | President, Rise Club | 5th, WIE Competition	

Skills

Product	User Research, PRD Writing, MVP Scoping, RICE Prioritisation, KPIs, Funnel Analysis, Agile/Scrum
AI Product	AI Evaluation, Launch Criteria, Human-in-the-Loop Design, Gemini API
Technical	SQL (MySQL, SQL Server, PostgreSQL), BigQuery, Python (Pandas, Matplotlib), Supabase
Tools	Power BI, Microsoft Fabric, Excel, Jira, Confluence
